PROFESSIONAL SUMMARY

Full-Stack Distributed Systems Engineer with 4 years of experience architecting high-throughput microservices, real-time

EXPERIENCE

Lead Backend Engineer | CloudScale Systems | 2021 - Present

- Architected a high-throughput distributed event pipeline using Apache Kafka and FastAPI processing 50k events/sec w
- Engineered distributed caching infrastructure using Redis Cluster reducing database queries by 64% and cutting p99 la
- Built and deployed resilient microservices on Kubernetes with automated canary deployments and Prometheus telemet
- Spearheaded migration from legacy monolith to asynchronous event-driven services, improving uptime to 99.99%.

Software Engineer | Apex Data Labs | 2019 - 2021

- Developed REST and GraphQL APIs using Python, PostgreSQL, and Docker handling over 10M daily requests.
- Designed asynchronous background task processing pipeline using Celery and RabbitMQ.
- Implemented automated CI/CD pipelines in GitHub Actions reducing deployment rollbacks by 45%.

TECHNICAL SKILLS

Languages: Python, Go, TypeScript, SQL

Systems & Cloud: Docker, Kubernetes, AWS, Apache Kafka, Redis, PostgreSQL

Frameworks: FastAPI, Django, Flask, React, Node.js

Concepts: Distributed Systems, High Availability, Microservices, Event-Driven Architecture, Concurrency

KEY PROJECTS

- Built an end-to-end distributed task queue engine with priority scheduling and dead-letter queue recovery.
- Engineered a real-time collaborative document synchronization system using WebSockets and operational transformati
- Developed an intelligent rate-limiter with token bucket algorithms in Redis protecting upstream APIs from DDoS spikes.
